

Universal masking keeps you safe.

Some people may have COVID-19 without signs or symptoms and can spread the disease without knowing they are sick. To keep you and others safe, masks are required for everyone in the healthcare facility, even if they do not have symptoms of COVID-19.

You may remove your mask when you are alone in your room.

You should put your mask back on when staff or visitors enter your room.

You must wear your mask when leaving your room.

Your health and safety are always our top priority.
